**The Suspects (įtariamieji)**

The **youngest** and most **impulsive** of all. Never stands still. **Fast**, **fiery**, and **unpredictable**. Wherever this suspect appears, reactions are **intense**, almost **explosive**, and full of **energy**. When exposed to **acid**, the response is **vigorous** and **immediate**. Capable of **displacing weaker metals** such as **Zinc, Iron, and Copper**. If the damage was **sudden and aggressive**, this suspect was likely nearby.

*Jauniausias, impulsyvus, greitas, ugningas, nenuspėjamas, intensyvi reakcija, sprogstama reakcija, energija, stipri reakcija su rūgštimi, išstumia cinką, geležį ir varį, staigus, agresyvus.*

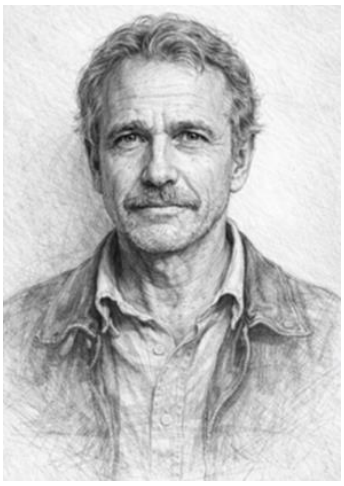

Energetic, yet more **controlled** and **thoughtful** than the first suspect. Prefers to act **quietly**, but with confidence. Reacts with **acid**, clearly visible but not explosive. Capable of **displacing Iron and Copper**, though not the strongest in the group. Often appears **innocent**, yet leaves **clear traces** behind. If the damage was **active but not chaotic**, this suspect should be seriously considered.

*Energingas, susivaldantis, apgalvojantis, tyliai veikiantis, reaguoja su rūgštimi, aiški reakcija, išstumia geležį ir varį, palieka aiškius pėdsakus, aktyvus, bet ne chaotiškas.*

**Stable**, **resilient**, and **patient**. At first glance, calm and **reliable**, strong like the structure it supports. Reacts under the right conditions, but with **caution**. With **acid**, the reaction is **slow** and without drama. Capable of **displacing Copper**, yet steps back in the presence of stronger metals. Often goes **unnoticed**, but the traces suggest **systematic**, not impulsive action. If the damage was **carefully planned** rather than aggressive, this suspect may be responsible.

*Stabilus, atsparus, kantrus, patikimas, lėta reakcija su rūgštimi, gali išstumti varį, sistemingas, apgalvojantis.*

The **calmest** and most **quiet** of all. Observes more than acts. With **acid**, there is **almost no reaction**. Does **not displace other metals** and prefers to remain **stable** rather than cause change. Often appears **"too calm"** to be guilty. If there was **minimal reaction** and only **subtle traces** at the scene, this suspect cannot be completely ruled out — perhaps not the initiator, but possibly present.

*Ramiausias, tylus, beveik nereaguoja su rūgštimi, išstumia kai kuriuos metalus, stabilus, „apgaulingai ramus", minimali reakcija, subtilūs pėdsakai.*
